**SCIENCE, ADVENTURE AND ANDROIDS!  
ALL IN A DAY'S WORK FOR KID-SCIENTIST ANNE.**

**52 X 22'**

A live-action/CGI blended series, *Annedroids* is the story of budding scientist Anne who builds robots to help her perform experiments with her friends Nick and Shania, and her android creations. It's a series that celebrates science, technology, engineering and math and does it all through the lens of an 11 year-old girl. There's nothing Anne likes more than getting her hands dirty to make things, breaking things apart to see how they work, and mixing things together to see that happens. Anne likes to push the boundaries of what's scientifically possible and has built three androids on her own: PAL, who is fascinated by everything and loves asking questions; EYES, whose ability to see things from all angles can get him into trouble; and HAND, who's strong and dependable but a little bit clumsy. Anne's experiments always lead to unforeseen complications, hijinks and misadventures. And that's where Anne's assistants Nick and Shania come in - Nick and Shania have an uncanny way of figuring out the real life solutions to Anne's scientific problems. Needless to say, when Anne, Nick, Shania and the androids work together, the results are far from predictable.
